Second Quarter 2017

President's Letter

Spring is in the air! You can tell by many little things: Baseball is on the radio from Arizona and Florida, new green leaves are visible on the trees, blossoms are blooming and there is a hint of warmth in the air as you step outside. What a wonderful time of the year.

After a very stressful fall with the transition to OneExchange for our Chevron health benefits and a tumultuous transition in Washington, D.C., it is a good time to relax and smell the roses and other flowers blooming out there.

OneExchange

Now that we have completed our transition to OneExchange, the remaining piece of the transition is getting our HRA, or Health Reimbursement Account, all set up. After a few hiccups I finally got mine set up for auto pay. Hopefully you have all done so by now.

Mike Elgie, President

One of the benefits that Chevron has expressed for OneExchange is that the post-65 crowd will have licensed experts to assist us as we navigate through potential problems. However, problems may still occur and if you do run into a situation where you are not getting resolution from OneExchange, CRA Benefits is prepared to help out. A phone call (816-506-0026) or email (lezleykbarth@gmail.com) to Lezley Barth can help you on the way to a resolution. And that remains true for the pre-65 crowd also. If you have difficulties with your coverage and are not receiving acceptable help from the HR Service Center, CRA Benefits is there to assist.

Please also see Lezley's Benefits Corner for more information about your benefits. She has some great "spring cleaning" suggestions.

Shared Practices

At last year's Annual Meeting a couple of chapters shared some practices that they had found successful for them. This is sometimes referred to as "Best Practices", but what may be a best practice for some may not be such for others. So we have settled on "Shared Practices".

Following up on the Shared Practices idea, we have had a fair amount of experiences shared via Paul Skakun's subcommittee in Membership and Lezley Barth's Benefits Committee. Thank you to Paul and Lezley for their efforts.

To make this information easier to access for all, Frank Coe will be adding this content to our existing [“Shared Practices”](#) page (renamed from “Best Practices”). If you are unfamiliar with this page, a link to it can be found on the [“Chapter Resources”](#) page under the “Resources” tab.

A large share of the Shared Practices have turned out to be things that chapters have been doing for the enjoyment of their members and to make it more attractive for potential new members. You recall that one of my Key Areas of Focus has been Membership. As a result, we have consolidated the accumulation and assessment of Shared Practices in the Membership Committee’s subcommittee on Shared Practices. Please send ideas and experiences you have had in your chapters to Paul Skakun (pts1942@gmail.com). If you send to others don’t worry, we’ll get them to Paul. He will work with Frank to get them to the CRA website.

Honoring CRA Long Term Service

For many years CRA has enjoyed the exceptional dedication and service of three individuals who are retiring from their CRA positions. At the upcoming Annual Meeting in San Mateo we will be honoring MJ Stone (Association Secretary), Frank Coe (Communications Chair) and Al Horan (Benefits Chair).

MJ and Frank have served in several positions in the CRA National organization. While they are leaving these important positions, we are fortunate that they will continue to help out in more “behind the scenes” activities. MJ will be assisting with the central committee being set up to help with Annual Meetings and Frank will help out as webmaster for the CRA website. We very much appreciate their extensive past service and thank them for their future activities.

As I noted in the last *Encore*, Al Horan has had to resign due to medical problems. So many of our members have benefited from Al’s compassion and diligence as he fielded questions, concerns and problems over the past 10 years. On behalf of all of your “customers” Al, thank you.

Final Thoughts

When I started my term as President I noted three main areas of focus: Leadership, Communications and Membership.

We have implemented a trial Fellowship Program to invite potential future leaders to the Annual Meeting to get a flavor for the Association beyond the chapter level. Such awardees must have endorsement of their Chapter President and the Area Vice President and agree to serve on a national committee or be in line to serve as a Chapter President. We had two awardees join us for the 2016 meeting and they have been very involved over the past year. This year we have two more joining us in San Mateo.

In the Communications area, Frank Coe has completed a significant revamp and upgrade of the CRA website. It was a big job and Frank did a great job. It will be much easier for future Communications Chairs to follow. In addition we continue to increase the percentage of members with whom we can communicate by email. That improves our efficiency and effectiveness of getting information out to our members in a timely manner. We still have room for improvement so I urge all chapters to continue to work on their obtaining email addresses for their members.

Membership is one of our crucial areas. We need to capture more retirees for CRA as they retire. It is hard these days, as retirees from all businesses seem to have many options competing for their time. And they are not as quick to join up as we used to be. One of the key areas we are focusing on is working with Chevron as they have various events for employees reaching retirement, such as their Boomer Networks, Health Fairs and Retirement Seminars. Especially in Houston and San Ramon, we have been sending in small teams of retirees to serve on panels, give short talks or just hand out

information and talk to soon to be retirees. It seems to be going well and the employees seem interested. The proof will be getting them to join up.

If you have any such events in your areas, please contact Chevron and ask to join in the festivities. Glenn Ewan can help you with material to hand out. Steve Ohnimus and Kathy Henschel have had good experience and can provide information that may be helpful.

In all areas there are plenty of Chevron and legacy company retirees that have not yet joined. If you know of someone, invite him or her to join you at your next chapter luncheon. And as these guests or new members are introduced at the luncheon, be sure to make a point to welcome them and talk to them. They could be the future of the organization.

Thank you

With the last couple of months of my time as your Association President coming to a close, this will be my last President's Letter to you all. I have been honored to serve as your president. I've had tremendous support from the three noted above, but also from the Association officers, Area Vice Presidents, and Committee Chairs at the national level.

Of course there are the Chapter Presidents around the country. All of your contributions are very much appreciated. CRA is fortunate to have these people volunteer their time for the benefit of fellow retirees. Many have served for over 10 years. As has been said many times, the chapters are the core of the Chevron Retirees Association.

Thank you to all and best regards and good wishes for 2017.

Mike

CRA News Briefs

Verne Baker, Texaco Retiree, Turns 100

We are pleased to recognize the 100th birthday of Verne Baker, a Texaco retiree and long-time member of the CRA. Verne currently resides in Cody, WY.

Verne grew up on a homestead 60 miles east of Rapid City, SD. His first job was in a café in Deadwood. He tried to follow one of his brothers into the service but was turned down because of a heart condition.

He eventually landed the Texaco job that began his 31-year Texaco career in Wyoming and Louisiana.

Congratulations, Verne!

Memories of Indonesia

Our retirees' memoirs and other recollections often provide valuable glimpses into the company's early ventures in distant, exotic places. Indonesia's Sumatra province was just such a place – an equatorial region of dense jungles and underdevelopment that finally yielded vast energy resources.

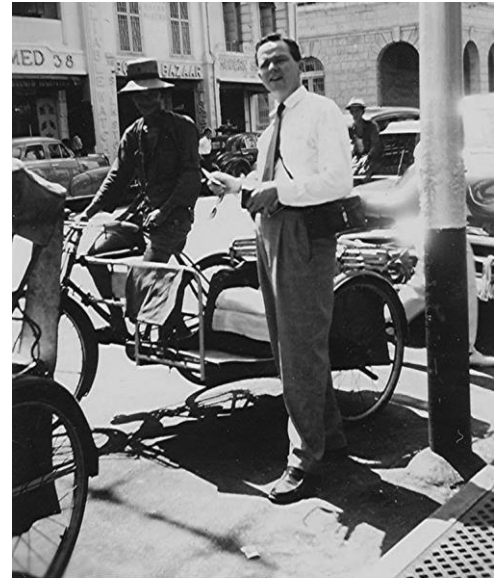

Encore is fortunate to be able to draw upon the memories of four individuals -- retirees and family members – who lived and worked in Sumatra during the 1950s through the 1970s. The following is their collective account of Chevron's and their experiences.

Bob Davenport's Great Adventure

Our company had been searching for oil in the jungles of Sumatra's Riau province since the mid-1930s. But by the spring of 1952, when Bob Davenport arrived as Caltex Pacific's first U.S. petroleum engineer, the region was about to become a major oil producer. Within weeks, the first shipment from the Minas Field headed down the Siak River to the port of Perawang, before being transported to our Richmond (Calif.) refinery.

Davenport, who retired from Amoseas Petroleum, a Chevron-Texaco joint venture, in 1968, says: "It was the beginning of a great adventure for me. I'd joined Texaco four years earlier as a petroleum engineer and the chance to go abroad was very appealing."

He arrived at a time when Caltex was still creating livable accommodations in Rumbai, along the Siak River, and Bob recalls that his original pre-fabricated house was "inadequate and uncomfortable." He continues, "The roads were unpaved, and the water was brown until we built a water system."

Bob Davenport, Singapore

**Dave Davenport,
on vacation in Bali**

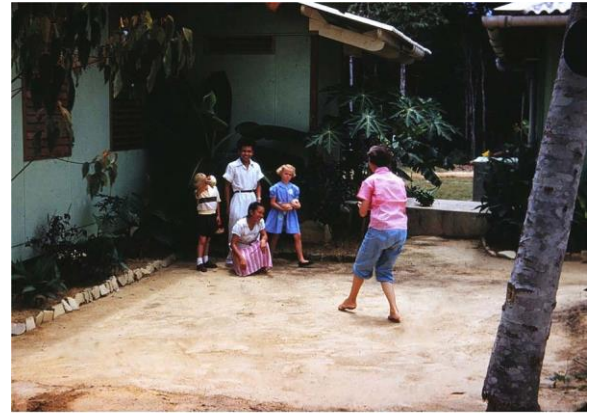

His son Dave, who arrived in Rumbai seven months later with his mother and sister, recalls the heady experience of arriving on a launch down the Siak River: "Rumbai was only one five-kilometer-long s-curve downstream, but what we saw along the way was a whole new world to us. First, there was the river itself. The water, largely leached from decaying jungle matter, looked astonishingly like Coca-Cola. The foam rising in our wake added to the illusion in a way which might have made us thirsty were it not for the smell of diesel exhaust in the air.

"Then, of course, there was the jungle, punctuated here and there by native shanties built out over the water on stilts."

Dave's account, from his memoir "Footprints," continues: "Rumbai and Pakanbaru (a nearby town, which eventually grew into a major city and was renamed Pekanbaru) were totally surrounded by jungle. There was not another town in any direction for almost two hundred kilometers. Consequently, Caltex would have to provide

us with most of our essentials. To this end, the company had set up a commissary in a Quonset hut on the road which came up from the river.”

By the time Bob’s family arrived, his accommodations had improved. As Dave writes: “Fewer than two dozen houses, prefabricated in Scandinavia (of all places), had been assembled and made ready for occupancy. All were single-story and were set above the ground on concrete pillars, plantation style. Each pillar was capped by a sheet metal collar to keep out the bugs and snakes. Each house had three bedrooms, one bathroom, an ample living/dining room space, a kitchen and a covered patio.

First home (1954)

“As soon as we pulled into the unpaved driveway that first day, we could see we were going to like the house we were given. It sat high above the road and was surrounded by a large expanse of grass. From the patio, one looked directly across the street into virgin rainforest.”

By then, Bob was building a staff of several engineers and writing all the programs and plans for the Minas Field. “My big challenge was defining the extent of Minas,” Bob says. “Within a year, I estimated that the field contained 2 billion barrels.” Minas would eventually become the largest oil field in Southeast Asia.

Sumatra oil well (1955)

“I designed the original production facilities and dealt with arguments over how we should drill at Minas,” Bob continues. “The field had pressure problems, which made it necessary to lift the crude with electrical submersible pumps. That method proved to be quite a success.”

In 1954, he became chief petroleum engineer for the renamed Caltex Pacific Indonesia (CPI) and concentrated increasingly on the development of the nearby Duri Field. Before he left Indonesia in 1959, Bob would oversee the drilling of more than 500 wells in Riau province. And by the end of his time there, CPI’s production grew to more than 200,000 barrels per day.

Among Bob’s contributions was increasing the number of Indonesian employees on CPI’s staff, in close consultation with the Indonesian government.

During his seven years with CPI, he observed marked changes in the region’s infrastructure and amenities, including the construction of the first paved roads and a bridge linking Rumbai and Pekanbaru as well as a hospital in Rumbai.

“Slowly, civilization moved in,” Bob says. “I liked camp life. It’s amazing how well the people got along. With no entertainment and despite the occasional sight of tigers on our lawns, we sat out and entertained each other beneath kerosene lamps. And our Javanese servants took care of us very well.”

He sums up, “It was a great experience for me, and a time of excitement, growth and adventure for my family.”

His son Dave's memoir is filled with vivid memories of the area's flora and fauna, the occasional threats posed by tigers, elephants and snakes, and the challenges of living in an evolving society.

One memory from 1958 is particularly vivid: "[E]ven though the fully independent Republic of Indonesia was only eight years old, there was already talk of rebellion on Sumatra. Regional commanders of the national army, not happy with the heavy hand of Sukarno (Indonesia's president), were demanding greater autonomy for the island. When their demands were refused, they took control of the island by force and set up a 'Revolutionary Government of the Republic of Indonesia.' They called it the PRRI. Sukarno sent in loyalist troops to put down the rebellion, and though we never actually saw, or even heard, any fighting in Rumbai, we did, for a time, have soldiers bivouacked around town.

Dave and friend, jungle swim (1958)

"We did have something happen, though, which almost sparked an incident. Dad and Mom had gone in as partners with some friends and bought a boat that was moored down on the Siak River. When the 4th of July came around, Dad got a brainstorm. He ran down to the river in the wagon and snatched up all the emergency flares and smoke bombs that were on the boat. Then he brought them back to the house, and, as the sun dipped below the horizon, he began setting them off for us in the front yard.

"We were lucky we didn't all get killed. Thinking they were under attack, the federal army showed up in a matter of minutes. It was really only a couple of jeeps, one of them bearing a ranking officer, but their guns were drawn, and they were ready for trouble!"

Marilyn Bremser's New Home in the Jungle

Our third account of an expat's life in Sumatra comes from Marilyn Thunfors Bremser, who in 1957 became teacher at a local school funded by Caltex. One of her original students was Dave Davenport. Marilyn eventually married Rudolph Bremser, a Caltex employee who retired from Chevron in 1985. Since Caltex forbid married couples from working jointly for the company, Marilyn left the school in 1959 and took a private teaching job in Rumbai. In her memoir in progress, she describes the day of her arrival in Sumatra:

"There I was met by the manager of the Rumbai camp, Al Makle and his wife who were traveling to the camp by a small cruising boat along the Siak River. Wow! I was Katherine Hepburn! ...this wasn't Africa and the sleek launch on which we rode was not the African Queen but the scenery

Shopping in Pakanbaru

along the river was comparable. Small villages of simple bamboo thatch, all raised above the water on their stilts; women in their colorful sarongs and bajus (blouses worn over sarongs) washing clothes along the river banks, the thick jungle alive with the sounds of animals and birds in the high reaches, the occasional sight of a crocodile disappearing as the ship cruised, children watching from the river banks.... another world from the American sights and sounds I'd known for all of my 24 years! An all-day trip down this meandering river was an entrance to my new world that began when we disembarked at the tiny village of Pakanbaru."

Her accommodations at the Women's Quarters, "my new home in the jungle," were basic: a tin-roofed Quonset hut building with crude concrete flooring, which consisted of "a kitchen with corridors leading from it in both directions, housing perhaps 10 women of many nationalities. Our rooms were about 12 ft. by 12 ft. with attached bathroom of shower, toilet and sink, furnished with single bed and desk, one chair, small sisal carpet, and a ceiling fan."

More surprises awaited her, as she accounts: "Once it was dark you did not dare to walk out because this camp was in the middle of a very dense, virgin jungle. Tigers, pythons, tapirs, wild boar were often encountered, particularly in the rainy season."

But she was eager to adapt to her new surroundings. Fortunately, she'd taken a course in Bahasa, the Indonesian language, which she quickly put to use as she became friendly with the local workers with whom she was in contact throughout her initial three years in Rumbai. "My knowledge of Bahasa was an entree; my appreciation of this new world and its people soon became obvious," she continues.

"What a kind and gentle people I found the Indonesians to be although extremely shy with these expatriates who now inhabited the central Sumatran jungle location," she continues. "Indonesian employees of the company were mainly recruited in Java but came from many of the 3,500 islands that comprise Indonesia. Most of these salaried employees had had a Dutch education so spoke Dutch, their own island or ethnic group dialect, additionally the new Bahasa Indonesian...and now were learning English to work for Caltex!"

She was assigned to teach elementary school children, roughly aged 9 through 12. She writes: "The children's parents reflected the educational spectrum of the oil industry...children of roughneck drillers from the Texas oilfields in class with children of East Coast doctors of geophysics; one British national's child preparing for his 'eleven's' (special tests for English school children); one Indonesian child with very progressive parents. Such a diverse group of children!

"I loved it! With very limited books and supplies, I had to create my lessons, adjust and adapt! The children came from many different states, which gave me an interesting perspective on the quality of education found in their home states. It was so hot that I taught with bare feet (concrete floors were quite cool). I had older children helping the younger; taught some lessons for all: it was challenging but interesting at the same time."

Rumbai School (1957)

She continues, "One of my favorite memories is of the accumulation of insects. It was true that two of my predecessors had left because they were frightened of the jungle and its array of insects. My smart little kids saw this as a great attempt to scare the new teacher so began bringing me incredible insects out of our jungle. I commandeered a huge table for the back of our classroom then had the chemical department supply me with formaldehyde. When I was presented with each new species, we popped it into a jar. One of my biggest regrets leaving that classroom was not being able to save the collection....nor do I even have a photo of the table."

After she lost her job in 1959, she accepted an offer from Franklin Liauw, a contractor from Pakanbaru, to tutor his two children, Sui Chin and Siau Lin. She recalls, "I had the privilege of tutoring them in my home every day for the remainder of my time in Rumbai. I also started English classes

for Indonesian housewives and in this way became lifelong friends of several of these women and their families.”

She became enthralled with her life in Rumbai, later writing: “I loved all of my time in Indonesia for many different reasons. Learning of this ancient culture, knowing its citizens, enjoying its beauty has been an important part of my life.”

Here is one passage that demonstrates her deep feeling for the region:

“The houses built on ridges had lovely landscaping ...frangipani, oleander, crotons, Rose of Sharon, various palm trees and grassy areas stretching between the houses, giving the appearance of a suburban enclave. But in between these housing areas the land fell steeply away into the dense jungle growth. Vines hung from the tall trees, enticing the children to swing across from one hill to another at their peril...for beneath were the snakes, the scorpions, the spiders, perhaps a tiger lurking. Each morning our loyal gardeners surveyed the areas around the house to assure the play areas were safe for the children. When it was the rainy season, the tigers were known to come into the camp searching for food.”

Though she returned to the United States in 1960, she later made periodic trips back to Indonesia. And her memories of “living in the heart of a dense jungle” remain fresh.

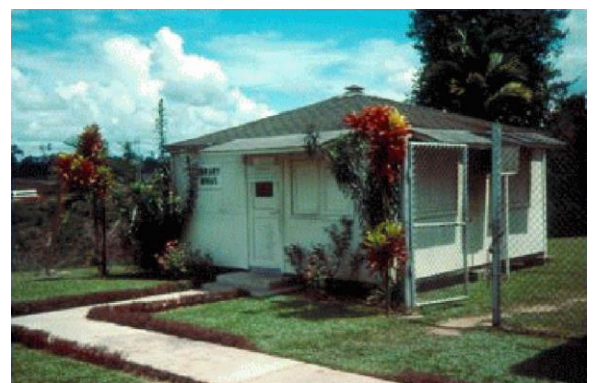

Charles Patterson: The Hunt for New Fields

The memoirs of the late Charles Patterson, who retired from Chevron in 1992, capture CPI’s dramatic growth – and some of its growing pains – in the decade of the 1970s. Patterson arrived at Sumatra’s Minas Field in early 1973, a fruitful time for CPI. As he recounts in his memoir: “I arrived on the day that we produced a million barrels per day. This was the peak of production in the Caltex Pacific Indonesia operation.”

He was quick to recognize the challenges he would face, working with a modest staff, in facilities that were far from ideal. He was assigned to the Minas camp, the smallest and least developed of the four camps at that time. The adjustment would be even more difficult for his wife Yvonne and daughter Cassandra.

In his memoir, Charles recalls: “When I first arrived there was no desk or chair for me. I sat by the water cooler on a trashcan, a rather Spartan situation. After a while I found an old abandoned Texas hut that was originally used as temporary quarters in new fields. Arrangements were made to move the hut to Minas, where I set it up behind the office and proclaimed that the New Fields Development Group was open for business.”

But he got a jolt of enthusiasm when he asked his supervisor how much authority he would have. “He said that you have as much authority as you think you can handle,” Patterson writes. “That really made me sit up and take notice.”

Texas Hut

He continues: “My work in Minas was my greatest experience since my tour with the Marines. The prime goal was to increase the daily production in any way possible. I arrived and was given the new job of senior petroleum engineer for New Field Development. This included the new fields outside the Minas Field -- Kotabatak, Petapahan, Lindai, Surinam, and Kasikan.”

Cementing in the Kasikan Field

He continues, “At this time the only engineers assigned to the district were petroleum engineers. This meant that they were responsible for electrical, mechanical, chemical, and construction in addition to production engineering. Needless to say, I had to dig deep to remember the things from college. When the boss found out that I had developed the maintenance program for a country club in Louisiana, I was assigned the task of water treatment for the camp. I worked with Sastro Periowa, who was in charge of Field Service. Most Indonesians were very cooperative and really wanted to get things done.”

After setting up a field base camp in the Petapahan Field, Charles recalls, “Sometimes on the weekend I would take Cassandra with me and we would eat in the mess hall. I like to think that she got something from being deep into the jungle of Indonesia. This was an area that no man had ever walked until we punched the road through the forest primeval. I was awe struck with this concept. Granted she was very young, but I think that I exposed her to many more things than the average child would ever experience.”

New Road, Petapahan

In 1976, Charles was transferred to Rumbai to work as the senior operations engineer. The move suited his family well. “Now Cassandra could get up and ride her bike to school. She would go to school listening to

House in Rumbai

the birds and monkeys making noise in the jungle around the camp. She and Yvonne were so happy, I figured it was worth it, though I did miss the job in the field.”

In his new position, he wrote, “I made up the budget, coordinated the drilling operation, developed the exploratory project economics and anything that did not fall under reservoir engineering. I got the opportunity to get involved in our shipping terminal at Dumai and the crude oil transmission system.” Patterson remained in this position until 1979, when the company transferred him to Bahrain. He recalls the years in Indonesia as his happiest, despite early problems of adjusting to life in the Sumatran jungle.

We are grateful to Dave Davenport, Marilyn Bremser and Charles Patterson for allowing us to quote from their memoirs, and to Bob Davenport for his recollections. Together, they serve as valuable eyewitnesses to an early period in Chevron’s rich Indonesia history.

Editor’s note: Charles Patterson passed away on February 13. He was an active contributor to this article through his online memoirs and signed off on it prior to his untimely death.

Benefits Corner *By Lezley Barth, Chair, CRA Benefits Committee*

When thoughts turn to Spring many items appear on our TO DO list--spring cleaning, planting, putting winter items away, clearing out the garage, and changing over our wardrobe. However, there is one activity that should be a priority for a number of reasons: (1) our own health (2) for the safety of toddlers, children, and pets, and (3) to reduce an accumulation that often causes confusion on what is/is not needed or effective within our medications and first aid supplies.

The objective of this quarter's **Benefits Corner** is assisting with the sorting process, identifying medications and supplies that are no longer viable, assessing prescriptions that require refills, over-the-counter medications and supplies that require replacement, and determining the appropriate disposal options.

Lezley Barth, Benefits Chair

Now, let's get started ...

Because the purpose of medications is treatment of conditions and diseases, it's essential that they are as effective as possible. As such, review each prescription bottle, package, or tube, for the expiration date (the packaging may include a "dispose by date"). What exactly does the expiration date mean? Required in the U.S. since 1979, law requires manufacturers to guarantee that their drugs have **at least 90% of the original potency** at the date of expiration, when stored under proper conditions.

Some medications have greater longevity and stability, while others are reported to more quickly lose potency, and could potentially have consequences after their expiration date. There may be others including newer medications that should also be included on the warning list below. Consequently, you should always check with your physician if you have a question on medications past their expiration date. **The best course is always, "Better safe than sorry!"**

Anticonvulsants	Eye Drops	Tetracycline
Contraceptives (Oral)	Insulin	Theophylline
Dilantin	Nitroglycerine	Thyroid Preparations
Digoxin	Paraldehyde	Warfarin
Epinephrine	Procan Sustained Release	
	Procainamide	

While there's considerable debate about medications and effectiveness past the expiration date, the fact is there are also a number of factors that impact the potency and potential life of medications:

1. The environment, including climate, heat, moisture, oxygen, and light. Keep in mind that many medications are stored in the bathroom where they may be subjected to additional heat and moisture from repeated showers/baths.
2. The form of the medication; i.e. solid or liquid/creams. A solid pill, capsule, or powder is typically more stable than a liquid/cream form.
3. Packaging and the closure. Sealed packaging (i.e. bubble-packs) can be more effective than opened bottles where contents have been compromised, thus diminishing the life.

Now that you have the background and better understanding of medication complexities, you're ready to begin the process of sorting and disposing of your medications:

1. Identify all prescription medications that you either no longer take or are past their expiration dates, then:

- a. Empty the prescription bottle or package into zip-lock/sealable bag, or margarine tub, or can with lid that will prevent leaking in the trash; and
 - b. Scratch through your personal information to make it unreadable on the pill bottle or prescription packaging, including prescription number, before placing the bottle/package in the trash.
2. Identify all over-the-counter medications that you no longer take or are past their expiration dates, then:
 - a. Empty the contents of the bottle or package into a zip-lock/sealable bag, margarine tub, or can with lid that will prevent leaking in the trash. Then place empty bottle(s) or packaging in the trash.
 - b. Review all other supplies in your medicine cabinet or the first aid kit in your home and car for expiration dates, to ensure you're using only those supplies that are still viable for use on wounds.

Once medications are sorted, it's time for the next steps:

1. Review current prescription medications to determine if any refills are required.
 - a. Make a list of medications that require refills: Include the Pharmacy, Prescription Number, Pharmacy Telephone Number, Medication Name, MG, quantity, number per day.
 - b. Contact your physician to request refills or make follow-up appointments, if required.
2. Review over-the-counter medications and first aid supplies.
 - a. Make a list of those medications and first aid supplies required for purchase.

The final step is responsibly disposing of unused and expired medications. Below are options to consider, though some medications, or delivery mechanisms (needles/syringes/inhalers/patches), have explicit instructions or limitations) on disposal:

1. Take-back programs safely dispose of most types of medicines. This program is confidential, with no questions asked. Keep in mind that needles, sharps, asthma inhalers, and illicit drugs are NOT accepted at the drop box.
 - a. The U.S. Drug Enforcement Administration (DEA) periodically hosts the National Prescription Drug Take-Back event where collection sites are set up in communities nationwide for safe disposal of prescription drugs. In 2016, the DEA set up 5,400 DEA sites across the United States. For 2017, their nationwide event is scheduled for **April 29, 2017**.
 - b. Consumers can visit the DEA's website at https://www.deadiversion.usdoj.gov/drug_disposal/takeback for more information about drug disposal, National Prescription Drug Take-Back Day events and to locate a DEA-authorized collector in their area. They may also call the DEA Office of Diversion Control's Registration Call Center at 1-800-882-9539 to find an authorized collector in their community.
2. Local law enforcement agencies also sponsor medicine take-back programs in your communities, such as "Dispose-a-Med." They typically establish dates and times at well-known locations, and distribute cards or flyers for consumers to pick up at local pharmacies or retail stores showing these dates and times. The events provide flexibility and advance notice that allow consumers to be prepared.
3. Local waste management authorities can also be contacted about disposal guidelines in each geographic area.
4. Pharmacies have envelopes for consumer purchase that can be used to send in unwanted medications for disposal.
5. Prescription drug labeling or patient information that accompanies the medicine may include specific disposal instructions. Otherwise, it is not recommended to flush medicines down the sink or toilet unless the label information specifically instructs you to do so.

- a. The rationale for flushing is due to the potential harm (i.e. including fatality) that could occur if used by anyone other than by the one for whom they are prescribed. To avoid accidental exposure by others, including children or pets, it's recommended that they are either disposed of quickly through take-back programs or that they are flushed down the sink or toilet as soon as no longer needed.
 - b. While flushing may be a concern, the fact is the primary source of drugs entering the water system is through passing through human bodies, as drugs are not completely absorbed or metabolized. These drugs are still present even when processed through wastewater treatment systems.
6. There is another disposal option; i.e. placing medications in the trash. Below is information on this approach:
- a. Mix medications (do not crush tablets or capsules; they will typically be absorbed by these materials) with a substance such as dirt, kitty litter, or used coffee grounds;
 - b. Place the mixture into a zip-lock/sealable bag, margarine tub or can with lid that will prevent leaking in the trash;
 - c. Throw the container in your household trash; and
 - d. Scratch out all personal information, including the prescription number, on the prescription label of your empty pill bottle or empty medicine packaging to make it unreadable, then dispose of the container.

Cautions:

There are other important medication cautions, but space constraints don't allow us to share them here. See the [complete 2nd Quarter Benefits Corner article](#) on the "[Benefits Corner](#)" page of the CRA website (chevronretirees.org).

The CRA Benefits Committee hopes you'll take this opportunity to review your medications as well as first aid supplies. You will not only have medications necessary for your current health conditions, but also first aid supplies will be up-to-date and on hand should you need them.
